

The bookmarklet scripts I wrote are available at <https://github.com/vincentdenoual/bookmarklets>.

Example bookmark using the Bureau Veritas certificates website, for organic food certificates. The script is contained inside a bookmark button the user clicks after the Bureau Veritas page has loaded. The script runs in a few milliseconds to add the hyperlinks to the certificates directly on the results page, hence saving the user from having to click on each “En savoir plus” default hyperlink.
